

How To Make A Picture Frame Out Of Lego!

Bricks You Will Need:

- Lots of colourful, flat Lego bricks (a mix of 2 and 1 studs wide).
- 1 lego hinge.
- Flat base plates.

Method:

- First, get your flat bricks (2 studs wide) and lay them in a rectangle shape. This will be the outline for your picture frame.
- Next, put another layer of flat bricks onto your starting frame.
- Then, put your thin bricks (1 stud wide) on the outside layer of your frame, leaving one side clear so you can slide your photo in at the end.

- After that put another **2** layers of flat bricks onto the thin bricks, make sure that where you have not put the thin bricks the flat bricks do not cover, so that the photo can get in and out relatively easily.
- To make the process of putting the photo in and taking it out more easy you could change the second layer from the bottom into smooth bricks.
- Make sure you don't put smooth bricks underneath the thin bricks otherwise they won't connect.
- Finally add a back to your frame using your baseplates and add your hinge at the back.

Now add your photo and then you have got yourself a lego photo frame.
